

KaVo FINEair

Only a fine air jet  
finds its way.

KaVo. Dental Excellence.

KaVo FINEair.

# Finest is important when drying with air.

Even air does not reach everywhere. Especially in poorly accessible areas such as root canals, which are difficult for conventional syringes to reach and can therefore almost never be dried.

KaVo FINEair produces an incredibly thin air jet as fine as hair, with which you can dry your working area with high accuracy in endodontics, in endosurgery and in minimal cavity preparations. Without residual moisture in the air jet. Maximum hygiene is ensured through the sterilizability of FINEair and the use of disposable cannulae.

FINEair operates in conjunction with the handpiece outlets most probably already installed in your practice. A special FINEair instrument is available for each of the two drive modes, air and electricity. MULTI-FINEair is driven by means of the KaVo MULTIflex coupling. INTRA-FINEair operates by means of the INTRA-matic connection. So you always have FINEair to hand. Regardless of which drive source is being used.

KaVo FINEair: a fine thing for dental drying.

Just fine.

INTRA-FINEair fits on any INTRAmatic connection.

MULTI-FINEair fits on any MULTIflex coupling.

A fine choice - the FINEair micro air cannulae.

Application example:  
Endodontics

Application example:  
Implantology
