

KaVo K-AIRplus

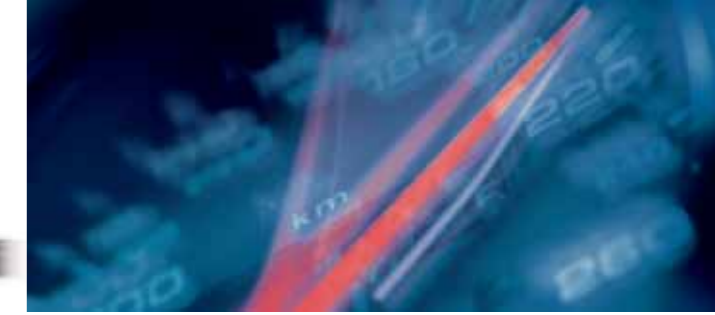

For a new speed record in your laboratory.

KaVo. Dental Excellence.

The KaVo K-AIRplus.

Are you keeping up with progress.

The KaVo K-AIRplus is ready for use with 5 FG tools included with the basic equipment.

3 functions in one handpiece - turbine, air nozzle and spray. With this trendsetting concept, the KaVo K-AIRplus not only makes work more convenient but also decisively increases the efficiency of your daily laboratory work.

For example when cleaning out workpieces. Thanks to the integrated air nozzle there is no need to change between handpiece and external air hand nozzle. Concentration and work flow are no longer disturbed and time is saved.

This worth while time saving between of 20 to 40 hours when processing 2000 crowns per year. This means a KaVo K-AIR plus will have paid for itself in as little as 1 to 2 years.

Integrated in the multifunction control: water tank with spray water regulation.

Simply operate the foot control to activate the required function: turbine on/off, turbine with/without spray.

The KaVo K-AIRplus is immediately ready for use: 5 FG burs belong to the basic equipment.

For working with ceramic materials, activate the K-AIR plus water spray. This prevents microcracks, improves the surface quality and increases the removal rate.

In addition, the life of the burs is doubled. Progress comes with KaVo K-AIRplus.

Mat.-No.: 0.553.3140
Spray air pressure: 3,7 bar
Air blast pressure: 6,0 bar
Speed: approx. 270.000 min⁻¹
